WORK EXPERIENCE

Software Engineer — Publicis Sapient

June 2025 - Present

- Built a **schema-driven / server-driven UI (SDUI)** renderer powering dynamic layouts, conditional fields, async data bindings, and versioned JSON configs — enabling product teams to ship configuration-driven experiences without redeploy, cutting UI rollout time significantly.
- Designed a **reusable, highly configurable table component** adopted as a shared platform primitive across 15+ modules and multiple product teams, improving UI consistency and reducing per-team maintenance overhead.
- Led adoption of a **federated design system** across 50+ teams, establishing shared component patterns, guardrails, and contribution standards to raise the quality bar across product surfaces.
- Centralized cross-service communication via a **shared network/API layer** with consistent error handling and retry logic, improving reliability and developer velocity for teams building on top of the platform.
- Architected **micro-frontend** boundaries and frontend infrastructure using React.js and Next.js, improving independent deployability and platform performance by 60% across product teams.
- Built an internal **MCP server** with dynamic tool discovery and context orchestration for AI coding agents, reducing LLM context overhead by 70% — part of a broader push toward **AI-native developer experience** and agentic engineering workflows.
- Designed a **client-server UI version synchronization system** (React + Nginx) as shared platform infrastructure, ensuring consistent builds across all consuming product teams.
- Applied **code-splitting, lazy loading, and dynamic imports** as reusable performance guardrails, reducing JavaScript bundle size and improving time-to-interactive across the platform.
- Architected scalable agent workflows leveraging **LangGraph**, vector databases, reranking, and hybrid retrieval techniques, increasing answer relevance by 42% and supporting thousands of concurrent enterprise requests.
- Managed the full project delivery lifecycle from conception to production rollout, maintaining a consistent **95% project success rate**.
- Secured workflows using **OAuth2** authentication protocols across the platform.
- Engineered end-to-end software solutions by analyzing complex technical requirements and translating them into robust, maintainable code, reducing production defects by **85%**.
- Leveraged enterprise-authorized AI-assisted development tools (e.g., GitHub Copilot, Claude) for code generation, refactoring, and unit test creation, increasing delivery velocity by **80%** while validating outputs through peer review and automated testing.
- Applied secure coding standards and responsible AI usage practices when integrating AI-assisted tools into the SDLC, ensuring data sensitivity, input/output handling, and compliance with firm security policies.

Software Engineer — Deqode

Aug 2023 - May 2025

- Built a **schema-to-React renderer** supporting dynamic layouts, conditional fields, async data bindings, and versioned JSON configuration — a configuration-driven UI framework consumed by multiple product teams.
- Owned frontend infrastructure modernization: migrated **Redux** to modular **RTK** slices + RTK Query, reducing API overfetching by 78% and standardizing state-management patterns across teams.
- Built a developer-facing **virtualized grid** component (1M+ rows) using react-window, published as a reusable platform primitive to reduce implementation cost for feature teams.
- Led a **federated design system** adopted by 50+ teams, enforcing accessibility, performance, and API consistency standards (ARIA roles, keyboard navigation, semantic HTML) across the component library.
- Instrumented **Web Vitals and Sentry** across 500K+ sessions/month to establish platform-wide performance guardrails (LCP, FCP, TTI), surfacing regressions before they reached product teams.
- Partnered with 15+ engineering teams to modernize deployment infrastructure (Kubernetes, MLflow, Terraform), compressing release cycles from 3 weeks to 2 days — direct experience owning platform tooling that multiple teams depend on.
- Created robust **AI monitoring and real-time dashboarding infrastructures** using Grafana, Power BI, and Looker to continuously track operational metrics, system health, and model drift.
- Built Aadhaar-Voter ID linking UI in React, scaling to handle high-traffic production loads with resilient, reusable components.
- Implemented **keyboard navigation**, focus management, ARIA roles, and screen reader support using semantic HTML.
- Produced architecture and design documentation for [system/module name], ensuring design constraints were consistently met across 2 cross-functional integrations.
- Built and maintained CI/CD pipelines using [Jenkins/GitLab CI/Azure DevOps], improving deployment frequency and reducing release cycle time by **90%**.
- Analyzed large, diverse datasets to identify usage patterns and system bottlenecks, developing dashboards/visualizations (e.g., using [Tableau/Grafana/Power BI]) that informed engineering roadmap decisions.

Software Engineer — Shiv Technolabs

Feb 2023 - July 2023

- **Leveraged deep knowledge of browser internals** to optimize performance, systematically reducing reflow, repaint, and bundle sizes to achieve significant improvements in Core Web Vitals.
- **Implemented advanced state management** patterns across complex application workflows using MobX and modern ES6+ JavaScript features for predictable data flow.
- **Led frontend performance audits** analyzing JS engines compilation behaviors and execution contexts to eliminate memory leaks and runtime bottlenecks.
- Orchestrated the transition to **Next.js** methodologies, integrating **RESTful APIs** to achieve seamless data transfer across platforms, which decreased website bounce rate by **15%** and grew traffic.
- Collaborated within an Agile/Scrum team, participating in sprint planning, code reviews, and retrospectives to continuously improve team coding hygiene and delivery practices
- Mentored junior engineers on safe and effective use of AI-assisted development tools, contributing reusable prompt patterns and best practices to the team's engineering playbook
- Ensured application resiliency and stability through implementation of [monitoring/alerting/failover] solutions using [Splunk/Datadog/CloudWatch], reducing incident response time by **90%**

Software Engineer — Sourcebae

May 2021 - Jan 2023

- Built full-stack applications with **React**, **TypeScript**, and **NestJS**, shipping REST API backends backed by **PostgreSQL** and **MongoDB** serving 100K+ users with sub-100ms p99 latency via Redis caching.
- Designed a reusable **TypeScript** component library with centralized state management, cutting feature delivery time by 40% across 5 concurrent product teams.
- Containerized services with **Docker** and established **CI/CD pipelines** with automated testing and staged rollouts, eliminating manual deployment errors and enabling zero-downtime releases.
- Built **offline-first UI** in React Native using SQLite for local data storage and background sync to update the server when reconnected.

PROJECTS

txt2create.com — Multimodal AI Generation Platform

PyTorch, CUDA, GRPO, QLoRA, vLLM, Kubernetes, TypeScript, MLflow

- Fine-tuned open-source generative models using **GRPO**-based reinforcement learning with custom reward functions for human preference alignment, improving prompt-adherence by 38% over SFT-only baselines.
- Built self-hosted **vLLM** inference stack on **Kubernetes** with GPU-aware scheduling, handling 500+ concurrent generation requests at p99 latency under 4s without any managed cloud ML service.
- Designed **TypeScript/Node.js** orchestration layer with async job queues and model-load balancing across backends; tracked 20+ fine-tuning runs with **MLflow** for reproducible experiment management.

EDUCATION

Rajiv Gandhi Proudlyogiki Vishwavidyalaya

Bhopal, India

Bachelor of Engineering (HONOURS) - Information Technology; GPA: 7.75

August 2016 - May 2020

ACHIEVEMENTS

- [AWS Certified Developer Associate](#).
- [AWS Certified AI Practitioner](#).
- [AWS Certified Cloud Practitioner](#).
- [Hacker Rank Javascript Basic](#).
- [Hacker Rank CSS certification](#).
- [Sololearn React + Redux](#)

TECHNICAL SKILLS

- **LLMs & Agents:** LangChain, LangGraph, CrewAI, Google ADK, LlamaIndex, Hugging Face Transformers, OpenAI API, Ollama, vLLM, TensorRT-LLM, MCP Servers, Agent Orchestration, RAG Systems, Prompt Engineering
- **Training & Optimization:** LLM Fine-Tuning (SFT, QLoRA, LoRA, PEFT), RLHF, GRPO, DeepSpeed, FSDP, Distributed Training, CUDA, Model Quantization (INT8, NF4)
- **ML & Deep Learning:** PyTorch, TensorFlow, scikit-learn, XGBoost, Classical ML, Feature Engineering, Model Optimization
- **Data Engineering:** Apache Spark (PySpark, Spark SQL), Databricks, Delta Lake, Kafka, Airflow, BigQuery, ETL/ELT, Feature Store (Feast)
- **MLOps & Infrastructure:** MLflow, Kubeflow, Kubernetes, Docker, Terraform, CI/CD Pipelines, Model Monitoring, Drift Detection, A/B Testing
- **Cloud:** AWS (SageMaker, EKS, Lambda, S3), GCP (Vertex AI, GKE, Dataproc, BigQuery)
- **Backend Engineering:** Python, FastAPI, Go, TypeScript, REST APIs, gRPC, Microservices, WebSocket, Redis, n8n
- **Databases & Vector Stores:** PostgreSQL, MongoDB, Redis, Qdrant, Milvus, Weaviate, Chroma, SQL
- **Frameworks:** Reactjs, Redux, Nextjs, SCSS, MaterialUI, ExpressJs, Jest, RTL, Enzyme
- **Tools:** Azure, Docker, Webpack, Git/Github, Postman, Swagger, Figma, Sequelize ORM, Firebase
- **Coursework:** System Design, Database Management Systems, Data Structures and Algorithms, Object Oriented Programming
- **Other:** RESTful Web Services, Agile methodologies, Integration testing, micro frontends
